The 2017 Malawi Malaria Indicator Survey (MMIS) provides population-based estimates on malaria indicators to inform strategic planning and programme evaluation. The 2017 MMIS is the 3rd Malaria Indicator Survey conducted in Malawi since 2012.

**FAST FACTS FROM THE 2017 MALAWI MALARIA INDICATOR SURVEY**

24% of Malawian children age 6-59 months tested positive for malaria by microscopy.

Malaria prevalence ranges from a low of 11% in Northern region to 26% in both Central & Southern regions.

More than 60% of children under 5 & pregnant women slept under an insecticide-treated net (ITN) the night before the survey.

More than 2 in 5 pregnant women received 3+ doses of SP/Fansidar to prevent malaria in pregnancy.

85% of women know that mosquito bites cause malaria.
