Front Matters Sustainable Development Goals Indicators

Page xxxiii Table Sustainable Development Goals Indicators

Column headings were added to differentiate indicators disaggregated by residence or sex. SDG Indicator names were added to the clean water and sanitation section and the DHS table number was corrected for SDG Indicator 6.1.1.

The table has been corrected in the electronic version of the report on the website.

Chapter 3 Characteristics of Respondents

Page 36 Text Section 3.9.2 Reason for Migration

The numbers were changed in this table and the text has been corrected in the electronic version of the report on the website.

The two most common reasons for migration among women and men are is employment (35% and 37%, respectively) (**Table 3.18.1** and **Table 3.18.2**). Migration for employment is substantially higher among urban women than their rural counterparts (48% versus 15%). A similar difference is observed among men.

Page 66 Table 3.18.1 Reason for migration: Women

DHS 2021-22

The numbers in this table did not align with the column headings.

The table has been corrected in the electronic version of the report on the website.

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012.

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012.

1 Total demand is the sum of unmet need and met need.

2 Percentage of demand satisfied is met need divided by total demand.

3 Modern methods include female sterilization, male sterilization, IUD, injectables, implants, pill, male condom, female condom, emergency contraception, standard days method (SDM), lactational amenorrhea method (LAM), and other modern methods.

Page 138 Table 7.15.2 Need and demand for family planning for all women and for sexually active unmarried women

The numbers were changed in this table.

The table has been corrected in the electronic version of the report on the website.

Table 7.15.2 Need and demand for family planning for all women and for sexually active unmarried women

Percentage of all women and sexually active unmarried women age 15–49 with unmet need for family planning, percentage with met need for family planning, total demand for family planning, and percentage of the demand for family planning that is satisfied, and percentage of the demand for family planning that is satisfied by modern methods, according to background characteristics, Cambodia DHS 2021–202222

	Unmet ne	ed for famil	ly planning		d for family urrently usir		Total	demand for planning ¹	family		Percentage	of demand satisfied by

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012.

¹ Total demand is the sum of unmet need and met need.

² Percentage of demand satisfied is met need divided by total demand.

³ Modern methods include female sterilization, male sterilization, IUD, injectables, implants, pill, male condom, female condom, emergency contraception, standard days method (SDM), and lactational amenorrhea method (LAM), and other modern methods.

⁴ Women who have had sexual intercourse within 30 days preceding the survey

Chapter 9 Maternal and Newborn Health Care

Page 175 Table 9.7 Place of delivery

The numbers were changed for mother's age at birth.

The table has been corrected in the electronic version of the report on the website.

Table 9.7 Place of delivery

Percent distribution of live births and/or stillbirths in the 2 years preceding the survey by place of delivery and percentage delivered in a health facility, according to background characteristics, Cambodia DHS 2021–2022

		Health facility		_

NGO = Non Governmental Organization

1 Birth order refers to the order of the birth among the respondent's live births.

2 Includes only the most recent birth in the 2 years preceding the survey.

3 For women who had both a live birth and a stillbirth in the 2 years preceding the survey, data are tabulated for the most recent birth only.

Chapter 11 Nutrition of Children and Women

Page 241 Table 11.7 Foods consumed by children in the day or night preceding the interview

Numbers were changed in the Cheese and yogurt column.

The table has been corrected in the electronic version of the report on the website.

Table 11.7 Foods consumed by children in the day or night preceding the interview

Percentage of youngest children under age 2 living with their mother by type of foods consumed in the day or night preceding the interview, according to age and breastfeeding status, Cambodia DHS 2021-22

Age in months Foods grains Foods Fried and such as choos lates, and other starchy grains Beans, made grains Dignature Beans tubers, and nuts, and grains Dignature Beans tubers, and nuts, and plantains Seeds Dignature Digna

Note: Service ladder concept/definitions based on the WHO/UNICEF Joint Monitoring Programme for Water

Supply, Sanitation, and Hygiene (JMP).

¹ Defined as drinking water from an improved source, provided either water is on the premises or round-trip collection time is 30 minutes or less. Includes safely managed drinking water, which is not shown

separately.

² Drinking water from an improved source, provided round-trip collection time is more than 30 minutes or is unknown ³ Drinking water from an unprotected dug well or unprotected spring

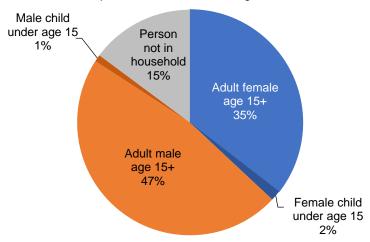

Page 350 Figure 16.2 Person collecting drinking water

The figure has been updated to reflect the new numbers in Table 16.3. The Missing/Don't know category has been removed due to an error in the original calculation.

The figure has been corrected in the electronic version of the report on the website.

Figure 16.2 Person collecting drinking water

Among de jure household population without drinking water on premises, percent distribution by person who collects drinking water

Page 350 Text Section 16.1.2 Person collecting drinking water

The numbers were changed in this table and the missing/DK column was removed due to an error in the calculation.

The text has been corrected in the electronic version of the report on the website.

In Cambodia, 47 16% of the population lives in households that do not have water on their premises during the dry season. The person who most commonly collects water is an adult male age 15 or older (32 47%), followed by an adult female age 15 or older (27 35%) and a person not in the household (6 15%) (**Table 16.3** and **Figure 16.2**).

Patterns by background characteristics

- Rural residents are more likely than urban residents to not have drinking water on the premises (23 21% versus 8 7%).
- By province, the percentage of the population without water on the premises ranges from less than 1% in Phnom Penh to 60% in Stung Treng.
- The percentage of household residents without drinking water on the premises declines dramatically with increasing household wealth, from 41 38% among those in the lowest wealth quintile to 2% among those in the highest wealth quintile.

Page 360 Table 16.3 Person collecting drinking water

The numbers were changed in this table and the missing/DK column was removed due to an error in the original calculation.

The table has been corrected in the electronic version of the report on the website.

Table 16.3 Person collecting drinking water

Percentage of de jure population in households without drinking water on premises, and percent distribution of de jure population in households without drinking water on premises by the person who usually collects drinking water used in the household, according to background characteristics, Cambodia DHS 2021–2022

Note: An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed.

1 Excludes water piped to a neighbor and those reporting a round trip collection time of zero minutes

2 During the dry season

Page 365 Table 16.8 Emptying and removal of wastes from on-site sanitation facilities

The numbers were changed in this table due to an error in the original calculation. Under sanitation facility type, rows were added for 'ventilated improved pit latrine' and 'composting toilet'.

The table has been corrected in the electronic version of the report on the website.

Table 16.8 Emptying and removal of wastes from on-site sanitation facilities

Percent distribution of de jure population in households with septic tanks and improved latrines by method of emptying and removal, and percentage of on-site sanitation facilities for which excreta was safely disposed of in situ, percentage of on-site sanitation facilities for which excreta was disposed of unsafely, and percentage of on-site sanitation facilities for which excreta was removed for treatment, according to background characteristics, Cambodia DHS 2021–2022

Background characteristic	Percent distribution of method of emptying and disposal of wastes from septic tanks or other on-site sanitation facilities									Percentage of population with on-site sanitation facilities for which:				
	Removed by a service provider to treat- ment plant	Removed by a service provider, don't know where	Buried in a covered pit	To un- covered pit, open ground, water body or elsewhere	Other	Don't know where wastes were taken	Never emptied	Don't know if ever emptied	Total	Excreta was safely disposed of in situ ¹	Excreta was disposed of unsafely ²	Excreta was removed for treatment ³	Number of persons with improved on- site sanitation facilities

Note: On-site sanitation facilities are those where the excreta are stored in a septic tank, pit latrine, or composting toilet.

Includes septic tanks and latrines in which wastes have been buried in a covered pit, never emptied, and don't know if ever emptied

Includes septic tanks and latrines in which wastes have been emptied to uncovered pits, open ground, water body, or other locations

Includes septic tanks and latrines in which wastes have been removed by a service provider to a treatment plan or an unknown location or were removed by a non-service provider to an unknown location
