

2012-13 Pakistan Demographic and Health Survey (PDHS)

The 2012-13 Pakistan Demographic and Health Survey (PDHS) provides data for monitoring the population and health situation in Pakistan. The 2012-13 PDHS is the third Demographic and Health Survey conducted in the country. Repeated surveys allow for an analysis of trends over time.

The survey is based on a nationally representative sample. It provides estimates at the national and provincial levels, including urban-rural breakdowns, as well as for Gilgit Baltistan and ICT Islamabad.

	Number interviewed	Response rate
Households	12,943	96%
Women 15-49	13,558	93%
Men 15-49	3,134	79%

Trends in Women's Education

Percent distribution of ever-married women age 15-49 by level of education

Trends in Fertility

Births per woman for the 3 years prior to the survey

*1990-91 figure based on 6 years prior to the survey

Trends in Childhood Mortality

Deaths per 1,000 live births

Trends in Maternal Health Care

Percent of women age 15-49 with a live birth in the 5 years before the survey

The 2012-13 Pakistan Demographic and Health Survey (PDHS) was conducted under the authority of the Ministry of National Health Services, Regulations and Coordination and implemented by the National Institute of Population Studies (NIPS). ICF International provided financial and technical assistance for the survey through USAID/Pakistan. The PDHS is part of the worldwide Demographic and Health Survey program, which is designed to collect data on fertility, family planning, and maternal and child health.
